EDUCATION

University of Calgary

Bachelor of Science in Mathematics

September 2024 – Present

Calgary, AB

- Relevant Coursework: Data Structures and Algorithms, Computer Architecture, Linear Algebra, Calculus, Foundations of Computing, Formal Systems and Logic

University of Alberta

Bachelor of Science in Computer Science (Transferred to UCalgary)

January 2023 – July 2024

Edmonton, AB

EXPERIENCE

Software Lead

AUV UCalgary (auvucalgary.ca)

September 2025 – Present

Calgary, AB

- Led the software division and designed, developed, and debugged the team's 11-page React/Vite website with 10+ reusable components, enabling non-technical members to update content independently.
- Developed a Gazebo Harmonic + ROS 2 underwater simulation in Python on Linux for RoboSub 2027, modelling 5 mission tasks, dual-camera sensors at 30 Hz, buoyancy, and hydrodynamics.
- Drove cross-team alignment across 5 sub-teams (mechanical, electrical, controls, computer vision, software) using Git/GitHub for version control and Agile sprints with weekly code reviews.

Software Developer

Khutba (khutba.net)

May 2026 – September 2026

Calgary, AB

- Architected and deployed a multi-tenant SaaS platform with 14 database tables, 48 REST API routes, and 25 pages using Next.js, React, TypeScript, PostgreSQL, and Tailwind CSS.
- Automated recurring billing and payment lifecycle with Stripe webhooks, reducing manual intervention and enabling real-time subscription management for paying customers.
- Secured the platform against common attack vectors (CSRF, XSS, brute-force) with bcrypt hashing, session tokens, Redis rate limiting, and role-based access control across English and Arabic interfaces.

Backend Developer

Cycle Breaker (cyclebreaker.net)

January 2026 – April 2026

Calgary, AB

- Built and shipped an educational platform serving nearly 2,000 users, designing 17 database models, 60+ API endpoints, and 29 pages with React, TypeScript, Express, and PostgreSQL.
- Developed a rule-based risk scoring engine, encrypted journal storage with AES-256-GCM, versioned snapshots, and recovery analytics for 7-day/30-day trends, streaks, and trigger frequency.
- Built a GitHub Actions CI/CD pipeline for automated testing and deployment, and implemented GDPR-compliant data export/deletion so users could control their personal data.

Full-Stack Developer

NikahNet – Matrimonial Platform, Pre-Launch (nikahnet.net)

August 2025 – Present

Calgary, AB

- Architected a full-stack platform with 10 database models, 50+ REST API endpoints, and real-time messaging via Socket.io and Redis, using React, Express, Prisma, and PostgreSQL.
- Built weighted compatibility scoring, intention-check workflows, guardian invitations, meeting scheduling, and an admin moderation system with audit logging and anti-spam controls.
- Designed a transactional email system with 19 templates and automated cron jobs, and integrated Cloudflare R2 for image storage handling validation, compression, and secure delivery.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, C/C++, Go, SQL, HTML/CSS, Bash

Frameworks: React, Next.js, Express.js, Node.js, Expo React Native, Tailwind CSS, Vite, Prisma ORM

Cloud & Infrastructure: Docker, Kubernetes, PostgreSQL, Redis, Firebase, Cloudflare R2, Vercel, Railway, Netlify, REST APIs

Developer Tools: Git, GitHub, GitHub Actions CI/CD, Vitest, Sentry, Stripe, Socket.io, Gazebo, ROS 2, Agile/Scrum

AI & Productivity: Claude Code, GitHub Copilot, AI-assisted debugging and code review
