EDUCATION

University of Calgary – Bachelor of Science in Mathematics & CS Sep 2024 – Present
University of Alberta – Bachelor of Science in Computer Science Jan 2023 – July 2024

- **Relevant Coursework:** Data Structures and Algorithms, Computer Architecture, Linear Algebra, Calculus, Foundation of Computing, Formal Systems and Logic

EXPERIENCE

Software Lead Sep 2025 – Present
AUV UCALGARY (auvucalgary.ca) *Calgary, AB*

- Led the software division and built the team's 11-page **React/Vite** website with 10+ reusable components, enabling non-technical members to update content independently.
- Developed a **Gazebo Harmonic + ROS 2** underwater simulation in **Python** on **Linux** for RoboSub 2027, modelling 5 mission tasks, dual-camera sensors at 30 Hz, buoyancy, and hydrodynamics for on-demand testing.
- Coordinate software deliverables with mechanical, electrical, controls, and computer vision sub-teams through **Git/GitHub** and an **Agile** workflow.

Software Developer May 2026 – Oct 2026
Khutba (khutba.net) *Calgary, AB*

- Architected and deployed a multi-tenant SaaS platform with 14 database tables, 48 API routes, and 25 pages using **Next.js**, **React**, **TypeScript**, **PostgreSQL**, and Tailwind.
- Built subscription billing and production infrastructure with **Stripe** webhooks, **Sentry** monitoring, Resend transactional email, **Docker**, Vercel Analytics, and JSON/CSV exports.
- Engineered authentication and application security with script hashing, secure session tokens, CSRF/CSP protections, **Redis** rate limiting, RBAC, and bilingual English/Arabic RTL support.

Backend Developer Jan 2026 – April 2026
Cycle Breaker (cyclebreaker.net) *Calgary, AB*

- Built and deployed an educational platform with 17 database models, 60+ API endpoints, and 29 pages using **React**, **TypeScript**, **Express**, Prisma, **PostgreSQL**, Netlify, and Railway.
- Developed a rule-based risk scoring engine, encrypted journal storage with AES-256-GCM, versioned snapshots, and recovery analytics for 7-day/30-day trends, streaks, and trigger frequency.
- Implemented JWT access/refresh rotation, account lockout, validation/XSS protections, GDPR export/deletion, media uploads, **GitHub Actions CI/CD**, and WCAG AA accessibility.

Full-Stack Developer 2025 – Present
NikahNet – Matrimonial Platform (Pre-Launch)/nikahnet.net *Calgary, AB*

- Architected a full-stack platform with 10 database models, 50+ API endpoints, and real-time messaging via **Socket.io** and **Redis**, using **React**, **Express**, Prisma, and **PostgreSQL**.
- Built weighted compatibility scoring across 8 dimensions, intention-check workflows, guardian invitations, meeting scheduling, and an admin moderation system with audit logging and anti-spam controls.
- Integrated **Stripe** billing, Cloudflare R2 image storage/validation, Redis rate limiting, 19 transactional email templates, CSP/CSRF protections, and automated cron jobs.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, C/C++, SQL, HTML/CSS, Bash

Frameworks: React, Next.js, Express.js, Node.js, Expo React Native, Tailwind CSS, Vite, Prisma ORM

Databases & Cloud: PostgreSQL, SQLite, Redis, Firebase, Cloudflare R2, Cloudinary, Vercel, Railway, Netlify

Developer Tools: Git, GitHub, Docker, Kubernetes, REST APIs, GitHub Actions CI/CD, Vitest, Sentry, Stripe, Socket.io, Gazebo, ROS 2
